GOLF CART OPERATING RULES

• Only licensed drivers may operate golf carts.
• Cart operation is restricted to designated paths and interior campus roadways.
• Carts may not drive along University-owned roads, unless otherwise marked on the map, and may only cross roads at designated crossing points.
• Carts are not permitted to drive along public sidewalks on Nassau Street, Washington Road, or Prospect Street, except where specified.

For golf cart assistance, please call 609.613.0015
GOLF CART OPERATION

- Make sure that the area around the golf cart is clear of any obstructions.
- Make sure the chain and lock have been removed and are stowed up and away from the steering wheel, wheels/tires, and back of the cart.
- Check to make sure that the golf cart is in Forward or Reverse
- Insert the key and turn to the right
  - **IMPORTANT!** Golf cart engines will not start until you press the gas pedal. Turning the key only engages the electrical system controlling the engine
- When pressing the gas pedal, if the engine does not make any sound, or attempt to start:
  - Release the pedal completely, and try again
  - If still no sound or attempt to start, check to make sure that the key is in and turned on and the cart is in Forward or Reverse
  - Re-try pressing the gas pedal to start the engine
  - **DO NOT** continually press the gas pedal or hold it down if the engine is not attempting to start, or making any noise. You run the risk of flooding the engine.
- When pressing the pedal, and the engine makes noise or attempts to start, but does not start/turn over:
  - Moderately pump the gas pedal to help the engine engage.
  - If this does not work after approximately 10 seconds, stop and wait 10 seconds and try again.
  - If the engine will not start on the second attempt, find the choke located next to the F-N-R gear selector below your seat and disengage it.
- The Choke is a knob or button that you can either pull to disengage or push in while pressing the gas pedal. Disengaging the choke will allow more oxygen into the engine, helping it to start.
- If you use the choke, make sure the knob or button is returned to its original position. If it is left open, then the engine can stall or produce smoke.
- If the engine will not engage, and you have tried the above:
  - With the key in the ON position, change the transmission to reverse.
  - If there is no noise made by the cart, or a faint sound, contact the Golf Cart Team (609.613.0015).

HELPFUL HINTS

- At the time of delivery, your golf cart has a 3/4 to full tank of gas. It should not run out unless you are operating it for more than 6 or 7 hours each day.
- When parking your golf cart, do not leave it in neutral. It could roll away or make you constantly check the transmission before operating the golf cart.
- When leaving the golf cart, always engage the parking brake. It will automatically release when you press the gas pedal, and it will help reduce the risk of your golf cart rolling away.
- If your cart is equipped with lights, they may be able to stay on even when the key is in OFF or removed from the cart. If the lights are left on, it will drain your battery and you will need to have it replaced.

If you are still in need of assistance, contact the Golf Cart Team (609.613.0015).
